Projects

Face Recognition - <https://face-detect-project.herokuapp.com/>

- Built an image recognition application using Clarifai's API to detect a face from an image URL.
- Designed RESTful backend server enabling data to be stored in an online database.
- Developed a front-end using Semantic-UI and Tachyons CSS Toolkit.
- Utilized: React, Node, Express, PostgreSQL, Heroku

RoboFriends - <https://rubayth.github.io/RoboFriends/>

- Developed a list of robot user cards by retrieving user information from JSON data.
- Imported unique robot images from RoboHash API generated by user information.
- Implemented an interactive UI with ability to filter robots based on user input.
- Utilized: React, Redux, Tachyons CSS Toolkit

Activities

HackGSU - <https://rubayth.github.io/backgroundGenerator/>

2017

- Built a background generator where developers can visualize a linear gradient background.
- Provided the CSS code for the user to add the background to their projects.
